

The first cloud-based fire pump monitoring system

# Peerless FireConnect®

Peerless FireConnect® is the first cloud-based solution capable of modernizing any fire pump system — giving you real-time, remote monitoring of the fire pump system whenever, wherever you need it. With the Peerless FireConnect® app, you have all the information you need right at your fingertips, allowing you to effectively monitor your system and make decisions remotely. Peerless FireConnect® is fire safety at its best.

## DIAGNOSE BEFORE DISPATCH

Fire system maintenance couldn't be easier or more efficient thanks to Peerless FireConnect®. With access to real-time and historical data, you can proactively address equipment issues and diagnose before dispatching service personnel when needed.

## IMPROVE EMERGENCY RESPONSE

Peerless FireConnect® takes fire safety to the next level. Customizable alerts will notify you within seconds of an emergency, giving you the information you need to make quick decisions. You'll immediately know your pumps' data flow and conditions so emergency response is as effective as possible.

## INCREASE BUILDING SAFETY

You can't predict when an emergency will arise, but Peerless FireConnect® ensures your building is always prepared for one. The app gives you the line of sight you need to all your fire pump equipment, which can indicate larger equipment issues like system leaks that trigger the jockey pump. If equipment needs attention, you'll be notified immediately so you can address the issue and keep your building safe.

## GET PEACE OF MIND

Peerless FireConnect® gives you confidence that your fire safety system will operate effectively in the event of an emergency. With 24/7 access to alerts and continuous reporting of over 65 pieces of system data, you'll always be the first to know what's happening at your facility.

## PEERLESS FireConnect® AT A GLANCE

- Works with all pumps
- Connects to any smart device
- 24/7 connectivity
- Customizable notifications
- Easily review tests for code compliance
- Anticipate maintenance issues
- Access critical data for fire incident command
- Ensure fire pump systems are always ready to operate

## DURING LOCAL OR WORLD CRISIS SITUATIONS, PROTECT YOUR FACILITY REMOTELY

When site access is severely limited due to local or world crisis situations — weather, pandemics — Peerless FireConnect® gives you live condition monitoring of your fire pump system remotely. Prevent business interruption and ensure confidence that your fire pump system is ready for operation even when it's difficult to be on site.

Peerless FireConnect® Gateway Controller transmits fire pump system data to the Peerless FireConnect® Cloud.

Peerless FireConnect® App displays all of your data on any smart device.

## WELCOME TO THE FUTURE OF FIRE SAFETY

### PUMP PERFORMANCE MONITORING

With remote access to vital pump information, you can monitor your fire system remotely in real time without ever having to visit the pump room. See power / voltage levels, system pressure, and current or previous alarms while your system is static, plus real-time operating conditions like suction and discharge pressures and GPM of flow while your system is running.

### FLEXIBILITY OF NOTIFICATION METHODS

Customize alerts and notifications so the right people get the right information. Choose from an extensive list of notifications and easily send alerts to multiple users through text or email.

### ANTICIPATORY MAINTENANCE (INSPECTION, TESTING, MAINTENANCE)

You now have all the information you need to proactively maintain your entire fire pump system and identify issues before they arise. Easily review alarm and event history to identify problem areas, and record jockey pump system operational values for indications of sprinkler system leaks.

### FIRE INCIDENT COMMAND ASSISTANCE

Easily view real-time information during the critical moments of an emergency so you can make quick and informed decisions. Access system pressure and GPM flow data to determine how many sprinkler heads are open and whether the fire is contained or growing.

### CODE COMPLIANCE AND TRENDING

You can now easily review fire pump testing history for both non-flow and flow tests, making sure your pumps meet code-mandated testing requirements. With a few simple steps, you can set a benchmark for future tests to ensure pumps continue to meet code parameters. Access to alarm and event history also allows you to see any potential problem areas.

### PROPERTY PROTECTION AND LIFE SAFETY

Future Peerless FireConnect® features will incorporate digital devices and sensors, allowing you to monitor additional equipment like sprinkler risers, hydrants and fire doors.

Get Peerless FireConnect® today by contacting your local authorized Peerless Pump distributor.
